

Kora National Park **Kampi ya Simba**

Tractor. The tractor / trailer / water bowser donated by TUSK Trust, WildiZe Foundation, Born Free and Martin Woodcock are up and running. We will pin down a full-time driver in time.

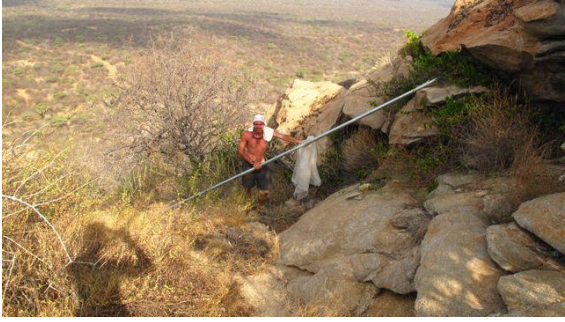

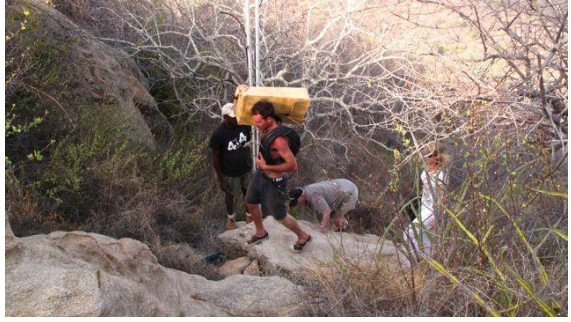

Apart from the big plastic storage containers, we also have built sedimentation tanks and upgraded the pumping system.

The trailer is bringing in building sand and will also soon be used for the village trips. When we have a road team in place, and once the team is established, the tractor will un-hitch the trailer and fit on the scraper blade to improve the road surface.

Radio Communications. We have started installing the VHF radio system. We have put in place the antenna, the repeater box (the box was made here in Mkomazi), the solar panels, batteries, controllers and the wiring. Fred Ayo went into Kora with a technician from Nairobi and they installed the repeater and base camp radio. This seems to be working well so far. We are now covered virtually the whole way in from the Kyuso town to Kampi ya Simba, as well as upstream and downstream. We have installed a base station in the KWS rangers' camp at the airstrip so that the KYS staff can communicate with them.

We have a fixed satellite dish in place at Kampi ya Simba and once again we paid for an engineer to come up from Nairobi to assist with the installation of the system.
