

Mkomazi National Park

We have undertaken some wild dog reintroductions over the past few months and feel that the Mkomazi / Tsavo ecosystem is one in which they will have a good chance of success. TANAPA's management of Mkomazi over the past two years has been impressive and we are delighted to see the return of the wildlife, including all the prey species for wild dog, the low numbers of cattle and poachers, as well as protected water sources.
